                                                                                                                                                                     7
                                     The present invention relates to coding sequences (see AAF44740-F44840 prod AAF4443-F44844) and proteins (see AAB65714-B65614) involved in programmed cell death (PCD; apotrosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by stably incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel defender against cell death polynucleotide useful for modulating programmed cell death pathway and specific development pathways in

The present invention relates to coding sequences (see AAF44740-F44840 and AAF44843-F44844) and proteins (see AAB65714-B65814) involved in programmed cell death (PCD, apoptosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by stably incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein identification; signal transduction pathway; metabolic pathway;

                                                                                                                                                                     1; Gaps
                                                                                                                                                                                                            The present invention relates to proteins derived from bovine mammary gland cells. The invention is useful for stimulating bovine mammary gland cell growth and function, inhibiting the growth of various mammary gland cancer cells, inhibiting the angiogenesis and vascularization of tumours, or modulating the growth of blood vessels in a mammal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polymucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polymucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and general; unmunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polymucleotide sequences. The lung cancer associated polymucleotide sequences. The lung cancer associated chromosome identification, as chromosome markers, and for numerous othromosome identification, as chromosome markers, and for numerous chromosome ic an exact purposes. The proteins may be used to treat disporders such as neural; immune, muscular, reproductive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Lung cancer associated gene sequences, referred to as lung cancer antigens, useful for treatment, prevention, and diagnosis of disorders

gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAF86459 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         189

This is the amino acid sequence of an inhibitor protein, termed .

B1-1, of the pro-apoptotic protein Bax. Nucleic acids encoding
B1-1, feee AAVS9067) and B1-2 (see AAVS9068) were identified by
suppression of Bax-induced death of yeast cells transformed to
suppression of Bax-induced death of yeast cells transformed to
express human Bax. A human HepG2 cDNA library was used for library
containing. The invention provides vectors, optionally expression
or viral vectors, containing B1 nucleic acids, and host cells
containing these vectors. The nucleic acids encoding B1-1/B1-2 can
be used to increase expression of these proteins in cells, or
antisense molecules prepared from them used to decrease expression.
In these ways, cellular apoptotic activity may be modulated. The
B1S and peptides portions are useful to detect, e.g. another B1 or a
member of the Bc1-2 family in biological samples. They are
cepecially useful in assays to identify agents (e.g. organic
cepecially useful in assays to identify agents (e.g. organic
college or peptides; claimed) modulating the specific association
of B1-1/B1-2 with a second protein (e.g. a B1, an anti-B1 antibody
or a Bc1-2 family protein (e.g. Bax) (claimed)) e.g. in screening
or attivity. The agents can then be contacted with cells to modulate
cellular apoptotic activity (claimed). Bax overexpression is
activity apoptotic activity (claimed). Bax overexpression is
cellular dord injuty, Parkinson's disease and Alzheimer's disease.
Antibodies raised against the B1s and peptides are also useful e.g.
to detect/quantify B1s in biological samples.
                                                                               Bax inhibitor proteins, BI-1 and BI-2 - useful e.g. to modulate cellular apoptotic activity or identify agents altering BI-1 or BI-2 binding which can modulate apoptotic activity
                                                                                                                                                                                   Claim 14; Fig 1; 80pp; English
                    WPI; 1998-531519/45.

                                                                                                                                                                                                                                   Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                              03-JAN-2002.
```

une invention relates to 2.1% novel numban ovarian antiques (AMPF41024-C ABP43228) and to CDMAs encoding them (ABD54111-ABD56305), and also encompasses polypeptides 90% identical and polymucleotides 95% identical comprises polypeptides in the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antique polymucleotides, antibodies against human ovarian antiques of ovarian antique polymucleotides and polypeptides in diagnosing, cof ovarian antique polymucleotides and polypeptides in diagnosing, cof ovarian antique polymucleotides and polypeptides in diagnosing, cof ovarian include ovarian cancer and breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, collycystic ovary syndrome, ovarian or breast origin, reproductive system disorders (e.g., chlamydia, HIV, toxoplasmosis, and toxic consortities onlycystic ovary syndrome, ovarian orysts, and dysmenorthoea), endocrine disorders, infertility, disorders of pregnancy, anovulation, and toxic consortities, and dysmenorial or disorders (e.g., chlamydia, HIV, toxoplasmosis, and toxic consortities, and dysmenorial and collycystic ovary system disorders (e.g., congenital and acquired immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), respiratory disorders (e.g., anaemia), cardiovascular disorders, respiratory disorders, neurological disorders, gastrointestinal disorders and unimary system disorders. Ovarian antigen polypeptides and proceeding may be used in screening for compounds which modulate ovarian antigen expression or activity. The polymucleotides may be used as food additives or to prepare antibodies constituted as human ovarian antigen of the invention. Sequence representes a human ovarian antigen of the invention construction of individual patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO car fibe sequence care for this patent did not form procession or effective or to prepare a invention relates to 2175 novel human ovarian antigens (ABP41054-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying at therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and the proteins are useful in genetic vaccination, testing and can be used as mutritional supplements. They may be used to increase stem cell proliferation, to regulate hemmatopoiesis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; im treatment of leukaemias. AAUSS10-AAU3304 represent the amino acid in treatment of leukaemias. AAUSS10-AAU3304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention issetul in developmental biology and in elucidating cell signalling and cell-cell interactions in higher exaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL36511), expressed DNA sequences (ABL16176-ABL36511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGING-ABL30511), expressed DNA sequences (ABL01875) and the encoded proteins

```
growth hormone (GH) in brown adipose tissue, by assaying the levels of specific gene transcripts. The genes of interest are those encoding glucosephosphate isomeraes. The genes of interest are those encoding glucosephosphate isomeraes, The genes of interest which are an encoding chair trans-Golgin etwork protein, alpha-enolase, proteasome theta adiporte lipid binding protein, medium chain acyl-CoA debydrogenase, anitochondrial NADH-ubiquinone oxidoreductase, mitochondrial cytochrome B or any of the genes Ng-GlisK2, Ng-119K65, Ng-119K65, Ng-119K65, Ng-119K65, Ng-119K65, This is useful for diagnosing abnowmal levels of GH or predicting changes in brown adipose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present invention provides a method of diagnosing abnormal levels of

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 516
